## 02. Make necessary tables to show the comparison between two experiments for the first dataset and discuss them.

In first experiment the loss is 1.91 and accuracy is 33.83 after 16 epochs. In second experiment the loss is 0.45 and accuracy is 67.195 after 16 epochs.

So, with the increment of epoch, loss decreases and accuracy increases.

To increase accuracy and to decrease loss we need to increase batch size and number of iteration.

## 03. Show the Loss vs Iteration graph.

05. Upload your code in Github and share the link in your report. https://github.com/Shachi1/SC\_assignment2.git
